Baxa Celebrates Earth Day 2010 Through Continued Environmental Stewardship
Baxa Corporation continues its corporate environmental stewardship with strong recycling programs and activities to reduce its overall environmental impact.

Englewood, Colo. – Baxa Corporation – a leading developer of medical device technology for the safe handling, preparation, packaging and administration of fluid medications – celebrates Earth Day 2010 with new corporate initiatives to create meaningful environmental change. Historically, Baxa has chosen product designs and raw materials that reduce waste and improve patient safety and minimize environmental impact. This year, to build on these initiatives, the company has chosen a LEED®-certified building for its new corporate headquarters and will reconfigure some of its product packaging to reduce its environmental impact.

Baxa supports lean manufacturing principles to reduce waste and scrap in production, along with encouraging electronic ordering to reduce reliance on paper processes. Widespread corporate recycling makes environmental stewardship visible to all associates, while promoting compliance. Finally, marketing and sales efforts increasingly rely on electronic media – reducing paper and ink consumption for printing and costs for packaging and distribution.

Yearly data provided by Waste Management shows that Baxa recycling efforts included 91.9 tons of single-stream recycling, which resulted in the following benefits for 2009:

- 322 cu yd of landfill airspace saved
- 1,562 mature trees saved
- 42,550 gallons of oil saved
- 2,206 gallons of gasoline saved
- 643,300 gallons of water saved
- 376,790 kw-hr of electricity saved

Earth Day 2010

Page 2

Continuing its support for 'ecological' efforts, Baxa chose a LEED silver-certified building for its new corporate headquarters. The new Baxa facility, scheduled for completion in May 2010, will provide a state-of-the-art working environment for executive officers, product development and laboratory testing; sales, marketing and technical support activities; and accounting and finance associates. Workspaces in the new facility maximize the use of natural lighting. "One of the great features of the new building is the room sensors that turn the lights off when there is no activity," states Steve vanEngen, Senior VP Operations. "The overhead lighting in the cubicle areas automatically adjusts based upon the amount of sunlight coming in the windows, allowing interior light to be very consistent in the building," he continues.

In a separate project, Baxa is changing the outer packaging for some of the accessories to its market-leading ExactaMix™ 2400 Compounder product line. The new packaging configuration is more environmentally sound – offering a smaller design and less waste than the previous package.

Baxa Corporation strives to address environmental impact in all of its operations – whether in manufacturing or office activities. The company operates under full compliance with the WEEE (European Waste Electrical and Electronics Equipment) Directive and promotes environmental stewardship in both global and local venues. Visit www.baxa.com for more information on the corporation or its key products.

About Baxa Corporation

Baxa, a customer-focused medical device company, provides innovative, solution-based technologies for medication handling and delivery. Its systems and devices promote the safe and efficient preparation, handling, packaging, and administration of medications. Key products include the Abacus® Order Entry and Calculation Software, the DoseEdge™ Pharmacy Workflow Manager (formerly IntelliFlow™), ExactaMed® Oral Dispensers, ExactaMix™ Automated Compounding Devices, MicroFuse® Syringe Infusers, Repeater™ Pharmacy Pumps, the PadLock® Set Saver and the Rapid-Fill™ Automated Syringe Filler; used worldwide in hospitals and healthcare
