**BAXA FINDS THE CURE FOR FINANCIAL REPORTING AND CONSOLIDATION
WITH HOST ANALYTICS' SAAS CORPORATE PERFORMANCE MANAGEMENT**

*Company Eliminates Spreadsheets, Automates Currency Conversions, Speeds
Financial Reporting Process with Host Analytics*

REDWOOD CITY, Calif. — June 21, 2011 — [Host Analytics](#), the industry's leading provider of SaaS-based corporate performance management, today announced that Baxa Corporation, a leading medical device company that provides innovative, solution-based technologies for medication handling and delivery, is using Host Analytics' Corporate Performance Management (CPM) suite to speed its financial reporting process and gain better visibility into both budgeting and business decisions.

Baxa develops and manufactures products for administering medications that enable healthcare providers to treat patients safely and effectively. The company is best known for its fluid-delivery automation solutions used in hospital pharmacy and nursing environments.

"Life in the finance department before Host Analytics could best be summed up in one word – tedious," said Irene Krysiak, finance director, Baxa Corporation. "Running stand-alone financials in Microsoft® FRx® and data manipulation with multiple spreadsheets was the norm, which meant monthly financial reporting processes could take up to three and half days simply to build the global financials. Using Host Analytics' CPM suite, we now spend more time analyzing the data than we do collecting and inputting it, which ultimately gives us better visibility into business performance and allows us to make smarter business decisions."

In less than one month, Baxa implemented the first module of Host Analytics' suite, Host Analytics Consolidator, and saw immediate simplification and time savings. The company allocates overhead costs to each product line, which historically was a tedious, manual process, involving multiple reports and spreadsheets. Using Host Analytics Consolidator the work is automated, transforming the process from hours to mere minutes. Overall, the company has cut roughly two days off the consolidation process each month, providing their financial analysts the tools and bandwidth necessary to provide more value to the business.

"Host Analytics has done wonders for our company because their solutions provide

precise information that business leaders require,” continued Krysiak. “The SaaS-based suite allows decision-makers easy access to the system and provides visibility into their budgets, which means they are able do more for themselves and have a deeper understanding of their data and its impact.”
