Baxa Corporation Releases IntelliFlow_{Rx}™ Upgrades

New release of the IntelliFlow_{Rx} workflow management system provides significant operational enhancements and new capabilities

Englewood, Colo. – Baxa Corporation, announces the release of upgrades to its IntelliFlow_{Rx} workflow management system. IntelliFlow_{Rx} is designed to improve safety and accuracy in pharmacy-based IV admixture preparation. The system also streamlines compliance with sterile preparation regulatory steps while improving visibility to and oversight of IV room operations.

The latest upgrade adds a number of features to the IntelliFlow_{Rx} System, including the ability to define specific workflows for different types of doses within the health-system pharmacy, i.e., preparation modes and drug delivery routes – enabling customers to prepare oral liquid doses using IntelliFlow_{Rx}. In addition, the system can now manage “dose kitting” processes for pharmacies that assemble sets of doses and their specific ingredients outside of their IV room. The upgrade also provides audio alerts that inform pharmacy technicians of potential errors or discrepancies, which can improve production efficiency and reduce the opportunity for medication errors.

“This upgrade is a significant milestone in IntelliFlow_{Rx}’s development,” notes Dennis Schneider, Baxa Sr. VP of Marketing and Business Development. “The new features address requests from its growing customer base to extend the benefits of IntelliFlow_{Rx} into more areas of pharmacy operation.”

In its first year of full production use, IntelliFlow_{Rx} has processed nearly a half million doses and serves more than 1,000 pharmacists and pharmacy technicians. Additional
